ABOUT DURO

Duro tire has been around since 1945, and in that time, we've learned a few things about making tires and tubes. First, we build over 70 years of technological know-how into everything we make, ensuring that each product is designed and manufactured with safety, long life, and maximum effectiveness for your particular application.

In addition to our premium bicycle tires and tubes, Duro produces a complete range of specialty tires. From ATV to Moto, to industrial and passenger car tires, Duro has your entire tire needs covered. Our manufacturing capability spans the globe, and our sales network is worldwide. Our product range covers the entire gamut of OEM and aftermarket applications, and our design and manufacturing capabilities are world-class.

TAIWAN

Duro has manufacturing facilities throughout Asia, as well as sales offices in the US and Asia, supporting our dealer network worldwide.

For all your bicycle and specialty tire and tube needs, look no further than Duro tires. For more information on the entire Duro product line, visit our website at www.duro.com.tw or www.durotire.com

MAXIMUM REFLECTION FOR RIDING SAFETY

Duro' s TruShine™ reflective strip technology increases tire's reflective surface from typical 5 mm,to anywhere between 9 and 18 mm, depending on tire size. The doubled reflective area makes yourself more visible to oncoming vehicles, which largely increases your safety. Duro's proprietary ink imprint technology on the reflective surface gives the reflective strip an elegant and gridded look, similar to carbon fiber weave

Custom ink patterns are available on a special order basis.Featured on Duro's city, commuting, and beach cruiser tires. TruShine™ reflective strips enhance the appearance of your bicycle, all the while keeping you safe on the street

TECH TERMINOLOGY

WIRE BEAD

Strands of wire coiled together, that secures the tire to the rim wall when tire is inflated. Tires with wire beads provide strength and proper tire retention, but cannot be folded.

• THREADS PER INCH (TPI)

Threads per inch (TPI) refers to the number of nylon threads that are laid upon one square inch of the tire's casing. A lower TPI indicates more responsive and durable, while a higher TPI means lighter and more pliable. Duro features TPI counts from 22 TPI, all the way up to 150 TPI throughout our range.

• FOLDABLE BEAD

Available in Aramid or Kevlar, foldable bead is lighter than a wire bead, while ensuring the same adhesion of tire to the rim. Tires with foldable beads are lightweight and easier for storage.

•TUBELESS READY (TLR)

Tubeless Ready tires are much lighter and air-permeable in the sidewall, and allow easier assembly. Duro's MTB and Road range features both bead and carcass technologies that allow for the use of tubeless sealant systems.

RUBBER COMPOUNDS

SLOW REBOUND

Available through special order only. Slow Rebound is our most supple compound. SlowRebound dramatically increases tire adhesion to any surface. Designed primarily for Gravity competition applications. Slow Rebound compounds improve control and grip.

• 60A

Our standard rubber hardness throughout our MTB. BMX and Commuting applications. Duro's 60A compound allows for a very responsive feel while providing a high degree of puncture protection and low rolling resistance.

• 70A

Available on our road training and commuting tires. Duro's 70A compound provides a steady, smooth ride and minimum rolling resistance.

• 52A RECOIL

Mountain Downhill and Freeride courses require a tire compound that provides maximum stickiness, while allowing minimum rolling resistance. Available in both the Razorback and Muckmeister mud tires, 52A Recoil compound ensures that every downhill and freeride run is fast, and our non-slip grip allows you to hold your line no matter what the course conditions are. Duro's 52A Recoil compound combines the best quality harder compounds with the added resiliency of soft compounds. Available throughout Duro's Gravity line.

DURO TECHNOLOGY

With decades of research and development, our R&D team offers tire and tube technologies that exceed even the most stringent testing requirements, and brings you the most advanced compounds and casings. Our latest lineup features the following compound and casing technologies.

Facing the development of electric bicycles and specific requirements of e-bike tires, Duro introduces évolve technology featuring compounds, casings and sidewalls that meet electric bicvcles' increased weight load, and decreases e-bike battery drain.

COMPOUND

HOOK-UP DESIGN

cornering grip.

DUAL COMPOUND

Dual Compound series with

two different compounds to

be used within the tread provide lower rolling resistance and increase

Our Hook-Up Design reinforces the close attachment between the tire bead and rim. A round groove of rubber stripping is added to the rim line

• D-TECH

D-Tech is Duro's exclusive breaker technology. Built into the casing. D-Tech protects the tire bead to bead, strengthens the sidewall, extends tire life and minimizes deformation.

REINFORCED CASING

Duro's reinforced casing technology provides a bead-to-bead carcass option of tire structure. Tire durability and loading capacity are strengthened with reinforced casing.

DPC-DIAMOND PATTERN CASING

DPC - diamond pattern casing made of special nvlon fabric provides great cut and puncture protection on the sidewall.

DURO SHIELD PUNCTURE PROTECTION

A 1mm' special undertread laver provides protection against street punctures, increases tread stiffness and allows tires to maintain shape under cornering and braking forces.

DURO SHIELD PLUS PUNCTURE PROTECTION

The best choice for city and commuting applications. Duro Shield Plus offers a 3 or 5 mm' undertread laver, featuring a complex structured compound lying between the tire tread and carcass.

MOTOR CASING

Derived from our manufacturing experience in powersports vehicles, Motor Casing dramatically increases lateral stiffness and resistance to deformation. Particularly effective in downhill applications.

KB-GUARD

Aramid fabrics' effectiveness as a snakebite resistant casing is well-known. KB-Guard offers maximum protection through increasing the stiffness of the body, and allows the tire to resist deformation in high speed cornering and braking application.

04 DURO BICYCLE TIRES

- Excellent minimal tread for training and racing applications120 TPI casing available
